

# Propane Has An Odor For A Safety Reason

Propane is an odorless, colorless gas.

A chemical odorant is added to propane to give it a distinctive smell so the presence of propane can be detected.

Always be sensitive to the slightest gas smell.

Learn to recognize the odor of propane gas.

To become familiar with the smell of propane, call your propane dealer for a Scratch-and-Sniff brochure, and ask to smell the propane when your propane dealer fills your tank.
